

PRESS RELEASE

Paris, 11th March 2019

Naval Group at Colombiamar 2019

From 13th to 15th March 2019, Naval Group participates to Colombiamar in Cartagena de Indias.

Naval Group will showcase the state-of-art innovations created for modern navies, demonstrating its capabilities in modern military ship and submarine building along with high tech solutions for systems and competence as leading naval integrator.

Come and meet us at booth # 60!

Contributing to naval and industrial autonomy in Colombia and Latin America

Naval Group is the European leader in naval defence and has been the main partner of the French Navy for over four centuries. Naval Group is one of the rare players in the naval industry to have the capacity to design, build, service and upgrade surface combatants as well as submarines, but also naval infrastructures and naval bases. It is one of the few manufacturers in the world able to offer fully armed ships with their combat systems and the equipment necessary for their engagement in theatres of operations.

Naval Group is an international and global player that strengthens its footprint worldwide through its presence on 4 continents and in 18 countries to ensure a sustainable presence close to its clients. Naval Group is significantly increasing its multi-domestic presence in Colombia and Latin America to strengthen its long-lasting cooperation with the navies in the region.

Naval Group has been working with Colombia on the modernisation of the Padilla frigates since 2008 and has set up a Regional Representative Office in Bogota to reinforce its partnership with the naval defence industry in the region and as well as its participation to the naval defence projects launched by the Colombian navy and neighbouring countries.

Naval Group is currently competing in Colombia for two fleet replacement programs. First, the Colombian Navy initiated in 2015 the replacement of the Padilla frigates (PES=Plataforma Estrategica de Superficie). This program requires the new ships to be built locally which will involve the development of a naval cluster through intergovernmental, industrial, academic and scientific cooperation. On the longer run, the Colombian Navy will also need to replace its submarine fleet.

Naval Group also has a unique experience of successful transfers of technology for the construction of both surface ships and submarines, but also of naval facilities. Egypt launched its first Gowind® built in Egypt on September 6, 2018 and Brazil launched its first Brazilian built

Scorpene® submarine in December 2018, while India already operates its own submarines at sea. Transfer of technology has also been performed –or is currently on track- in Australia, Malaysia, Pakistan, Saudi Arabia or Singapore.

In South America, Naval group has recently reinforced its presence through two major contracts with Chile and Brazil, thanks to our Scorpene® submarine, the most suitable solution to replace U209 submarines operating in the region.

Naval Group is also proud of its successes in the combat management system (CMS) retrofits on U209 submarines in the region which demonstrates its ability to work closely with the navies and local industrial partners, even on submarines not of its own design.

Naval Group presents its leading technologies at Colombiamar 2019

Naval Group is a naval systems provider and integrator, one of the few companies in the world with the ability to deliver complete warships with their combat systems and all the critical equipment necessary to engage naval power in a theatre of operations. It is involved at every stage in the product life cycle.

The stand on Colombiamar will reflect this comprehensive offer with a focus on surface ships and innovative solutions.

Gowind®: a sea-proven international success for PES

Gowind® is the multimission frigate proposed to Colombia for PES program. Gowind® is Naval Group's response to 21st century defence and security challenges. The platform combines high survivability characteristics with outstanding anti-air (AAW), anti-surface (ASuW) and anti-submarine (ASW) warfare performances thanks to the MU90 and to the CANTO®-V.

The Gowind® is operated with the SETIS®. This state-of-the-art combat is combat-proven on the French Navy's FREMM frigates and interoperable with NATO systems. It provides the operator with the best management and decision-making aids, ensuring the Gowind® supremacy over conventional and asymmetric threats.

Nine of the ten Gowind® vessels contracted are being built with foreign partners in Malaysia and Egypt. The first Gowind® built in Egypt was launched on September 6, 2018.

SCORPENE®: combat-proven oceanic submarines for the replacement of the Colombian fleet

Scorpène® is the conventional submarine proposed to Colombia for its fleet replacement. Naval Group combines unique platform and combat system skills to provide operational superiority and safety benefiting from the French Navy legacy. Naval Group contributes to strengthen the sovereignty of its customers through long-term partnerships, industrial cooperation and through-life support services, as proven by its strong credentials.

Scorpène® is ideally suited for action and operational effectiveness. Robust and enduring, it's an ocean-going submarine also designed for shallow waters operations. Multipurpose, it fulfils the entire scope of missions such as Anti-Surface and Anti-Submarine Warfare, special operations, offensive minelaying and intelligence gathering.

Standing as the latest generation of combat system, SUBTICS® addresses the growing challenges of modern submarines missions in blue and shallow waters such as Anti-Surface and Anti-Submarine Warfare, intelligence gathering, land-attack or deep strike.

Highly modular and scalable, SUBTICS® can be integrated either on new platforms or as part of modernisation programmes for existing submarines.
